(a) one reading, four instants: the face has no date
clock reading θ/2π [h]
physical time [h]
m = 0
m = 1
m = 2
m = 3
(b) a rotation of the face is inert; a cut is not
relabeling g(t) = θ/2π − t [h]
physical time [h]
a constant offset is a rotation of the face: every label is still displayed somewhere (inert, no m lost)
seam
a step cuts the cover: the seam hour is skipped, so 23 labels are displayed that day, not 24
no relabeling: g = 0
global shift: g = 5 h
DST: a step in t
